

## IK Foam Pro 2 Sprayer Technical Datasheet

---

### Product Description

The IK FOAM Pro 2 professional sprayer has been manufactured for the generation of dry and durable foam. Designed to be used with chemical agents with surfactant properties.

IK Foam Pro 2 provides the user with a dense, permanent foam that is ideal for professional aircraft cleaning. Foam generating sprayers are the perfect method of application for a number of aircraft fuselage cleaning chemicals. The foam holds the cleaning chemical in place for longer therefore allowing a longer soak time resulting in a more efficient dissolution of the dirt and oil leaving a much cleaner surface. An additional benefit is that chemical consumption is reduced and less of the aircraft cleaning chemical runs off the aircraft onto the hanger floor or airport ramp.

The IK FOAM Pro 2 handheld sprayer is a foam generator designed for cleaning tasks in various sectors. It has a wide filling mouth, ergonomic design, safety valve set at 3 bar (depressurisable), base for greater stability, coloured caps to identify the contents of the tank, safety lock on the opening and closing system.

The sprayer is equipped with three mixers (orange, grey and green) which allow to vary the type of foam by choosing between wet, intermediate or dry foam. With the use of the foam we manage to increase the contact time between the chemical and the surface to be cleaned, cleaning fabrics and upholstery avoiding excessive soaking which generates the appearance of fungus and bacteria, and finally having greater visual control of the sprayed surface. The easy manual assembly and disassembly of the IK Foam Pro 2, allows a complete maintenance without the use of tools.

Specifications: Valve – Tared at 3 bar / 43,5 psi depressurizable Standard nozzles Special nozzle with fan-type foam Useful capacity – 1,25 L – 42 Oz. Total capacity – 1,9 L – 64 Oz. Gross weight – 0,7 kg – 1,54 lbs. Net weight – 0,56 kg – 1,23 lbs.

**Commodity Code:** 84244100
